FAA MICROFORM PUBLICATIONS AND SYSTEMS CATALOG

November 13, 1987

DEPARTMENT OF TRANSPORTATION
FEDERAL AVIATION ADMINISTRATION

Distribution: A-WXYZ-2: A-FOF-O(LTD)

Initiated By: AMS-410

FOREWORD

The use of micrographics technology plays an important role in today's modern office. The output of this technology is microforms, which is a generic term for various types of microfilm, such as microfiche, 16mm cartridge, and aperture cards. Recent advances in the micrographics industry have resulted in growing acceptance of microforms as a dynamic information medium. This growth has also been stimulated by the spiraling increases in the cost of paper, postage and printing. The use of computer-output-microfiche (COM) instead of bulky paper printouts is a prime example of efficient and economical information interchange. Another good example is computer assisted retrieval (CAR) microform systems that can automatically and quickly find and display microfilm images from large active files.

It is the purpose of this compendium to provide assistance to FAA offices in identifying and locating needed information that may be available only in microform format. The first section categorizes major microform publications and systems in use throughout the agency. Each micropublication is described by title, microform format and office of primary interest or source. The remainder of the catalog breaks out exactly what microform publications and systems are in use in Washington Headquarters and each center and region. This section lists the systems or microforms by title and provides reference to microform format, source and using office.

Those microform publications or systems identified as major in scope can be obtained by contacting the referenced OPI or source. Field offices and facilities can also obtain many other microform publications and listings by contacting the source office in their regional headquarters. Additional useful information about microform formats and micrographics can be found in FAA Order 1350.21A, Microform Standards and Order 1350.20B, Micrographics Program Management.

The data contained in this publication was obtained by AMS–410 from our counterparts in the regions and centers. Any additions, corrections or questions concerning this catalog should be directed to AMS–410 in Washington, D.C.

Michael D. Sherwin

Director of Management Systems

APPENDIX 2.

OUTSIDE SOURCE ADDRESSES 1

CHAPTER 1. GENERAL

1. **PURPOSE.** This catalog is issued by the Office of Management Systems as an inventory of microform publications and systems that are being used within the Federal Aviation Administration. The catalog can be used as a guide to find sources for information and publications that have been converted to a microform or micropublished.

2. **DISTRIBUTION.** This order is distributed to division level in Washington, regions and centers and a limited distribution to all field offices and facilities.

3. **DESCRIPTION OF CATALOG.** The catalog is a compendium of microform publications and systems that are being utilized throughout the agency. The catalog listings are contained in Appendix 1, FAA Microform Publications and Systems Catalog. Microforms, micropublications and microform systems are described by title, format, source, and user office. Addresses for sources of microforms outside of the FAA are listed in Appendix 2, Outside Source Addresses.

4. **DEFINITIONS.**

a. **Aperture Card.** A tabulating card with a retangular hole that contains a frame of 35mm microfilm; used mostly for engineering drawings.

b. **Cartridge.** A single core plastic container enclosing 16 mm roll microfilm that is designed to be inserted into a reader or reader-printer for viewing.

c. **Format.** A dimensioned layout that describes size, placement, and reduction ratio of a microform.

d. **Microfiche (fiche).** A sheet of high resolution film containing multiple microimages (frames) in a grid pattern and a title that can be read without magnification.

e. **Microfilm.** A high resolution roll film containing images greatly reduced in size from the original.

f. **Microform.** A general term for microimages recorded on high resolution film which includes microfiche, aperture cards, microfilm, and computer-output-microfiche (COM).

g. **Micrographics.** The science, art, and technology of document/information miniaturization and associated microform system.

h. **Microimage.** A unit of information, such as a page of text or drawing, that is too small to be read without magnification.

i. **Micropublication.** A publication, report or document that has been converted photographically to a microform for the purpose of distribution and use as a primary source of information.

j. **System.** All related equipment, software, microforms, files, etc., employed for production and use of microforms.
